About Wolfelele Ukeleles

Wolfelele Ukeleles' founder and proprietor, Wolf Kater, is a world renowned harpsichord and guitar builder who began building guitars at the age of 12 branching out to pipe organs, lutes, viola da gambas, and other historical keyboard instruments. Wolf also acquired his B. Mus. and MEQ tech-voc/voc teacher certification at McGill University.

The Power of Music Learning

Wolfelele Ukeleles

The Power of Music Learning

Music and the arts have floated up and down in order of importance in school curriculums over the years and hands-on activities have not always been at the forefront of the educational system. Studies have shown, however, that for a student to adequately acquire certain skill sets or for students who are challenged by traditional learning methods, learning through hands-on and music activities can be an enormous capacity building tool.

Music learning from an early age has been shown to stimulate the brain's neural pathways helping children develop learning, memory and social interaction abilities.

Recent studies demonstrate how learning music can help children:

- ✓ improve reasoning capacity and

problem solving skills

- ✓ improve math and language performance

- ✓ aid in the development of better memory

- ✓ aid in the development of social interaction and team building skills

So how can you capitalize further still on helping your students learn through music?

Competency Building

An appreciation and love for music can exponentially explode simply by allowing the student to *build* their own instrument. Building an instrument that actually plays will reap myriad benefits:

- ✓ Develop cognitive skills
- ✓ Develop reasoning capacity
- ✓ Kinesthetic learning tool
- ✓ Foster creative expression

- ✓ Galatea effect

Our Tri-lele Kit has been designed specifically to address the above key learning skills, meet current teaching criteria and have been used successfully in elementary and high schools, folk festivals, ukelele clubs, and community youth oriented groups.

Our product allows students to easily build their own hand-crafted instrument in a classroom setting. Designed to encourage interactive participation, competencies building, and hands-on learning students will take pleasure in their sense of accomplishment and ownership as they assemble a playing instrument from simple parts. They will equally delight in the creativity and individualism they can express as they decorate the finished product.
